### Soil Nailing Best Practice Guidance

Soil nailing - best practice guidance (C637) Soil nailing is a technique where either natural ground or fill material is reinforced by the insertion of slender tension-carrying elements called soil nails. A soil-nailed slope or wall usually consists of the soil nails themselves, a hard, flexible or soft facing to a slope or wall surface, and surface water and subsurface drainage systems.

FOREWORD. This Geoguide presents a recommended standard of good practice for the design, construction, monitoring and maintenance of soil-nailed systems in Hong Kong. The Geoguide summarises the experience gained from the use of the soil nailing technique in Hong Kong and the findings of related technical development work.

## **GUIDETO SOIL NAIL DESIGN AND CONSTRUCTION**

- Wide spacing of nails can effect internal stability
- Soil nail spacing should not exceed 1 nail per 6m<sup>2</sup> of hard facing or 1 nail per 2m<sup>2</sup> to 4m of flexible facing otherwise the soil nailed structure will not act as a reinforced mass (CIRIA C637)
- Max. spacing - typically 1 - 2m Nail Spacing 25
