Equivalent expressions are two or more expressions that may look different, but represent the same quantity or have equal values when evaluated. The expression 2x + 4x and the expression 6x are equivalent expressions. Example B Use the Distributive Property to factor 12x − 18. Step 1: Determine the greatest common factor of each term. 12x − 18

Unit 2: Expressions and Equations - Math
Unit 2 Expressions and Equations. This module consolidates and expands upon students' understanding of equivalent expressions. Students use the number line to understand the properties of inequality and recognize when to preserve the inequality and when to reverse the inequality when solving problems leading to inequalities.

7th Grade Unit 2 Information Expressions & Equations
In Unit 2, eighth-grade students hone their skills of solving equations and inequalities. They encounter complex-looking, multi-step equations, and they discover that by using properties of operations and combining like terms, these equations boil down to simple one- and two-step equations. Students also discover that there are many different ways to approach solving a multi-step equation, and they spend time closely looking at their own work and the work of their peers.
