Title: Boeing E-6 Mercury The E-6 is based on the Boeing 707-320 and is the last new-build variant of the 707 in production. 16 examples were built between 1987 and 2006. The role of the aircraft is as an airborne command post and communications relay aircraft for communicating with submerged US Navy submarines. This title contains two flight manuals for the Boeing E-6 Mercury.

Project Mercury was the first human spaceflight program of the United States, running from 1958 through 1963. An early highlight of the Space Race, its goal was to put a man into Earth orbit and return him safely, ideally before the Soviet Union. Taken over from the US Air Force by the newly created civilian space agency NASA, it conducted twenty uncrewed developmental flights (some using ...

Test

Shepard was now able to take manual control of the spacecraft, and began testing whether he was able to adjust its orientation. The first thing he did was position the spacecraft to its retrofire attitude of 34 degrees pitch (nose of spacecraft pitched down 34 degrees). He then tested manual control of yaw, motion from left to right, and roll. When he took control of all three axes, he found that the spacecraft response was about the same as that
