I first ran across the Programming Principles and Practice Using C++ book while I was searching for books that covered the new features introduced in C++11 and was surprised to see that this book covered both C++11 and C++14, and from the creator of C++, Bjarne Stroustrup himself. I was aware of

Programming is learned by writing programs. In this, programming is similar to other endeavors with a practical

component. You cannot learn to swim, to play a musical instrument, or to drive a car just from reading a book — you must practice. Nor can you learn to program without reading and writing lots of code.

**Programming:

Practice Using C++:
Stroustrup ...**

As you know, the purpose of the programme is to

compute simple arithmetic expressions.

The expressions are made of numbers, arithmetic operators (sum, subtraction, multiplication, division, remainder), and parentheses to group compounds and override the usual operator precedences.
